

Suction support bar 40 cm

- **Very high resistance rubber suction pads**
- **With lock indicator**

Our 40 cm suction cup bar makes it possible to secure a bath, a shower or a toilet without having to drill unsightly holes in a wall tile. It can be installed in a few seconds without tools and is mainly used for support when getting out of the shower or bathtub.

The main advantages of a suction cup bar: you can put it down and move it around without any outside help, tenants do not have to make holes in the tile, you can take it with you on trips as it is light and space-saving...

Press the two lateral levers and it holds very firmly on all smooth surfaces (tiles, earthenware, glass surface, lacquered paint, PVC surface of shower cubicles...). Its locking indicator shows whether the suction cup is correctly engaged.

Diameter of the suction cup: 10 cm

Length 40 cm.
