

Stable tripod end cap

- 816050

- **Compatible with any 19 mm diameter rod**

A small, handy utensil that can be used to replace the existing tip. Its operating system is simple. You pull it upwards, it stays high and you can walk normally. You turn it a quarter of a turn, it repositions itself at the level of the pad and allows the cane to stand on its own. Very easy to install.

Weight 110 gr.

Compatible with any 19 mm diameter cane.
